

Good CSI does not mean the water is right

Dam-break model, own data:

median CSI 0.134, median volume 2.30x | 64.3% of event pairs disagree | 0/19 good-CSI/bad-volume

Dam-break model, rainfall data:

median CSI 0.604, median volume 135.49x | 35.7% of event pairs disagree | 9/19 good-CSI/bad-volume

Rainfall model, own data:

median CSI 0.524, median volume 10.30x | 38.0% of event pairs disagree | 8/19 good-CSI/bad-volume

Rainfall model, dam-break data:

median CSI 0.183, median volume 0.33x | 38.6% of event pairs disagree | 0/19 good-CSI/bad-volume

One dot per held-out flood event. Pairwise disagreement = the share of event pairs where CSI and volume accuracy rank them in opposite order.
